

We don't sell monitoring systems*

*we sell *peace of mind*...

SZE HAGENUK
Safety Culture

Overview

SZE Hagenuk is specialised in providing leak monitoring solutions for high volatile liquids such as crude oil, petrol or naphtha as well as low volatile products such as heavy oil, kerosene, diesel oil and water.

The monitoring solutions can be integrated in existing monitoring systems or operate independently often at remote locations.

SZE Hagenuk offers heat tracing to aboveground, underground and underwater piping systems. Typical applications are freeze protection - keeping fluids above their freezing point and temperature monitoring to maintain the viscosity for efficient fluid flow.

Typical Applications include crude oil unloading and chemical plants where 100% reliable temperature control in pipelines is imperative.

Services

SZE Hagenuk designs accurate and accountable leak and temperature monitoring systems.

We can supervise the installation and manage the complete project.

We offer alarm monitoring services and engage initial emergency responses if required.

SZE Hagenuk handles many special requirements, from remote solar powered SMS alarm systems to high security military aviation applications.

Yes, we agree, that our brochure sounds a lot like the usual marketing blurb.
But when you think about it would the following **unique selling points** help you to relax better?

- real time warning. locally or remote.
- selective monitoring of hydrocarbons or acid, ignoring water
- pinpoint accuracy on leak location
- single point, multiple point, line and area reporting
- keeps monitoring after first alarm and stores leak expansion map to black box
- heat monitoring and pipeline heating from the same company
- 24/7/365 initial emergency response service available
